## AMERICAN AUTO-MATRIX INTRODUCES SBC-VAV3 CONTROLLER

**EXPORT, PA, JULY 19, 2002**—American Auto-Matrix (AAM) is introducing a new version of its popular SBC-VAV variable air volume controller product line. The SBC-VAV3, part of the Evolution Series, is a pressure dependent VAV controller ideal for low-cost applications. It uses an integrated feedback actuator to adjust the damper position without the use of a flow or pressure sensor. The SBC-VAV3 has the full compliment of I/O found on AAM's other VAV controllers including 5 triac outputs, 1 universal input, 1 analog output and feedback actuator. The SBC-VAV3 controller works on existing Public Unitary Protocol (PUP) networks, and includes features like backwards compatibility with the American Auto-Matrix family of products, state-of-the-art surface mount technology, and zone temperature input with 15-bit resolution. American Auto Matrix designs and manufactures a wide range of products and solutions for the building automation industry, and is a pioneer of open architecture, generation-to-generation compatibility, direct digital control (DDC), and object-oriented programming. For more information, visit our website at [www.aamatrix.com](http://www.aamatrix.com) or call 724-733-2000.
